I would like to see universal calling using phone numbers for all equipment provided by different VP companies. We need the blocks changed to where incoming calls can be recieved via any equipment using phone numbers, and outgoing calls can be made via any equipment by using phone numbers. In order to recieve equpiment, some providers make us to sign agreement not to use the services of other vrs providers, and we might sign this not understanding what we are signing.
I would like to see all video phones work with eachother in an universal way, as telephone numbers do.
Thank you.
